Problem Definition

Problem Definition

display / graphics /
video

Problem - Purpose

format
memory / deep pipeline
device / CPU

Problem - Source

rotation
scaling
composing

Problem - Processing

X11
Wayland
DirectFB
Raw API

Problem - Stack

DRM FBDEV V4L2

Problem - API

Origins

Origins – DRM/KMS

Origins – V4L2

Origins – FBDEV

IT TOOK A LOT OF WORK, BUT THIS
LATEST LINUX PATCH ENABLES SUPPORT
FOR MACHINES WITH 4,096 CPUs,
UP FROM THE OLD LIMIT OF 1,024.

DO YOU HAVE SUPPORT FOR SMOOTH
FULL-SCREEN FLASH VIDEO YET?

NO, BUT WHO USES THAT?

	DRM	FB	V4L2
Dynamic Allocation	Yes	No	Yes
Multiple Buffers	Yes	panning	Yes
Import	dmabuf	No	userptr
Export	dmabuf mmap	mmap	mmap

Memory Management

	DRM	FB	V4L2
Formats	4CC	RGB 4CC	4CC
Enumeration	Planes	No	Yes
Negotiation	No	No	Yes
Atomicity	Yes	No	No

Mode Setting

	DRM	FB	V4L2
Overlays	Yes	No	Yes
Rotation	Yes	No	Yes
Scaling	Yes	No	Yes
Cropping/Panning	Yes	Yes	Yes

Transformations

Documentation

“ The DRM core exports several interfaces to applications, generally intended to be used through corresponding libdrm wrapper functions. In addition, drivers export device-specific interfaces for use by userspace drivers & device-aware applications through ioctls and sysfs files.

External interfaces include: memory mapping, context management, DMA operations, AGP management, vblank control, fence management, memory management, and output management.

Cover generic ioctls and sysfs layout here. We only need high-level info, since man pages should cover the rest. ”
